This guide will explain how to connect a screen via a shared connection from a wireless device. Please note that this guide is written for SSSP and Tizen screens.

After enabling your shared network on your phone, follow those steps :

1. Press “Menu” on the remote controller and use the bottom arrow to navigate, go to 'Network'

2.Once in network, press enter and go to network settings

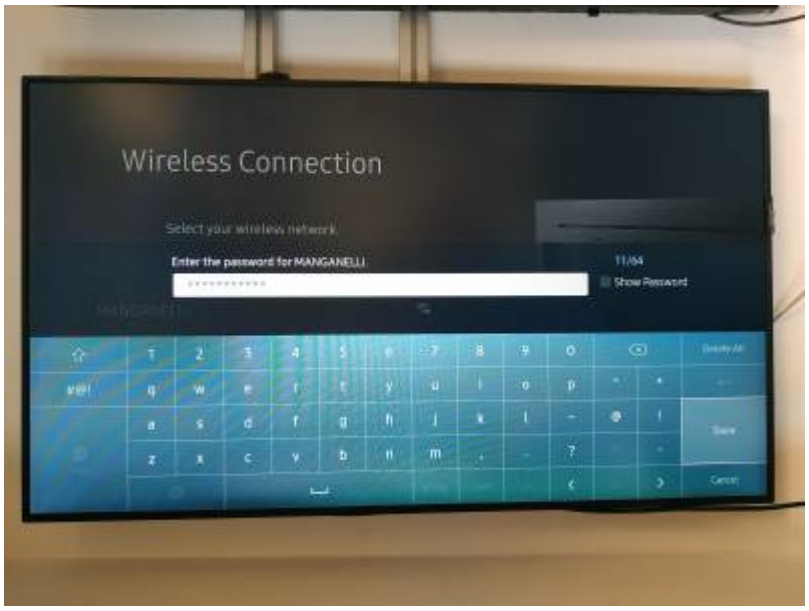

1. You are now in the network configuration wizard, select “Wireless” and press enter

4.Choose the network's name that you've setted on your phone

5.Enter the password that you have set on your phone and press “done”

If the connection succeed, you should see this message (with “Wireless” written instead of “Wired”)

6.Press enter, then “Home” on the remote and validate again to launch Zebrix
