Add a Power BI Zone to My Zebrix Page

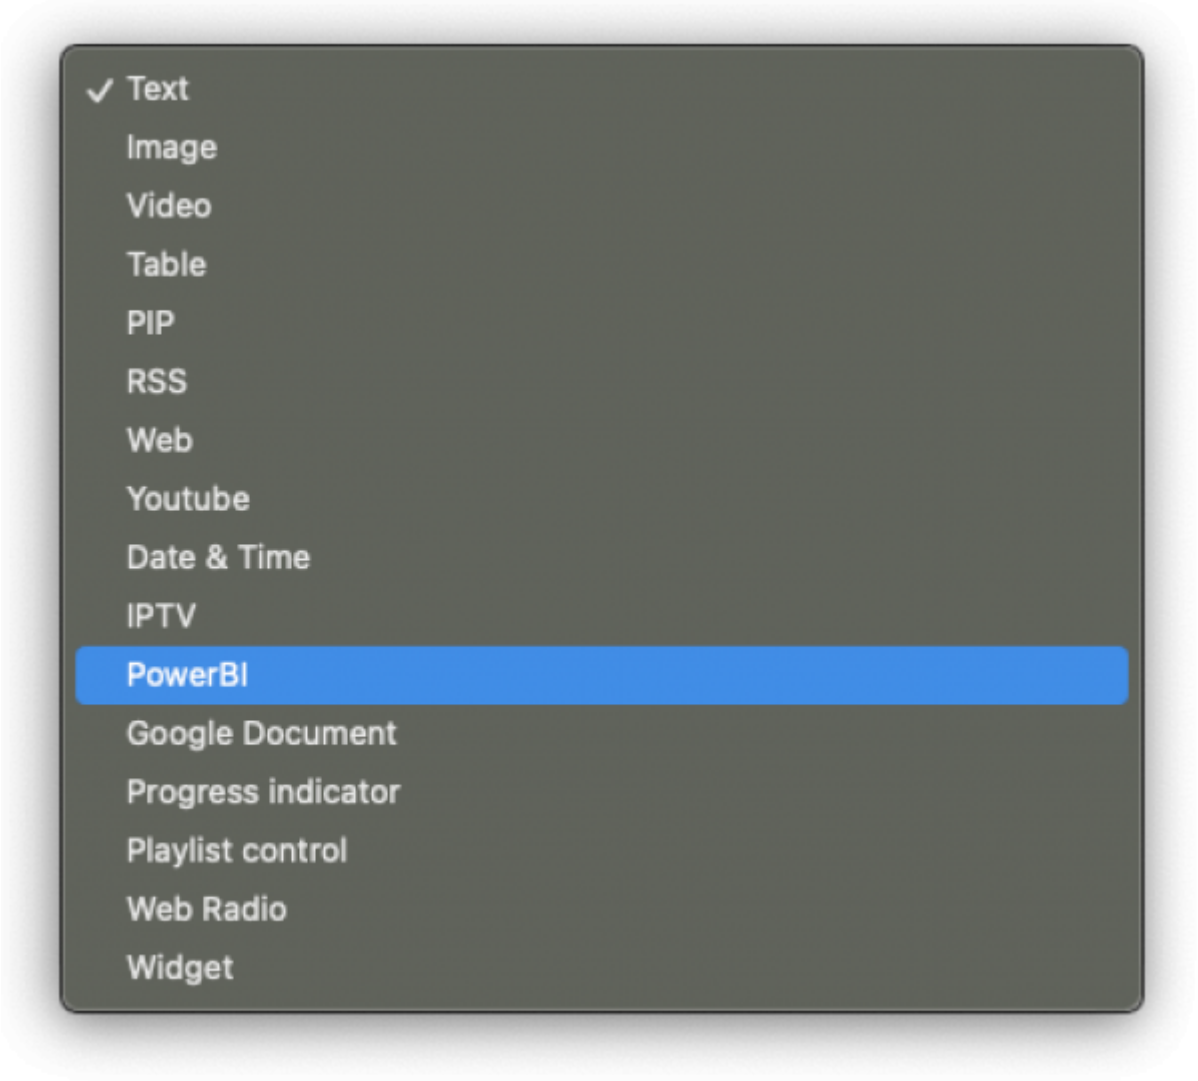

Prerequisites:

- An open page in Zebrix
- An available Power BI account

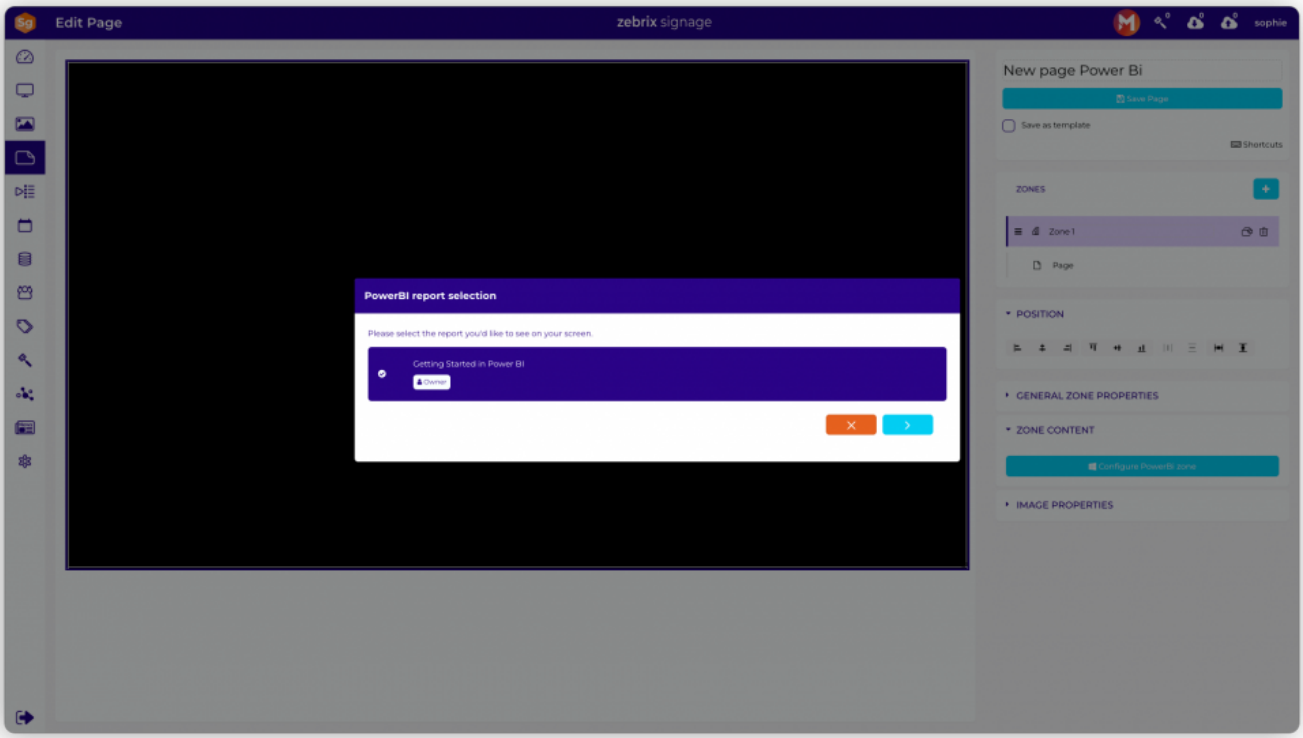

Setup

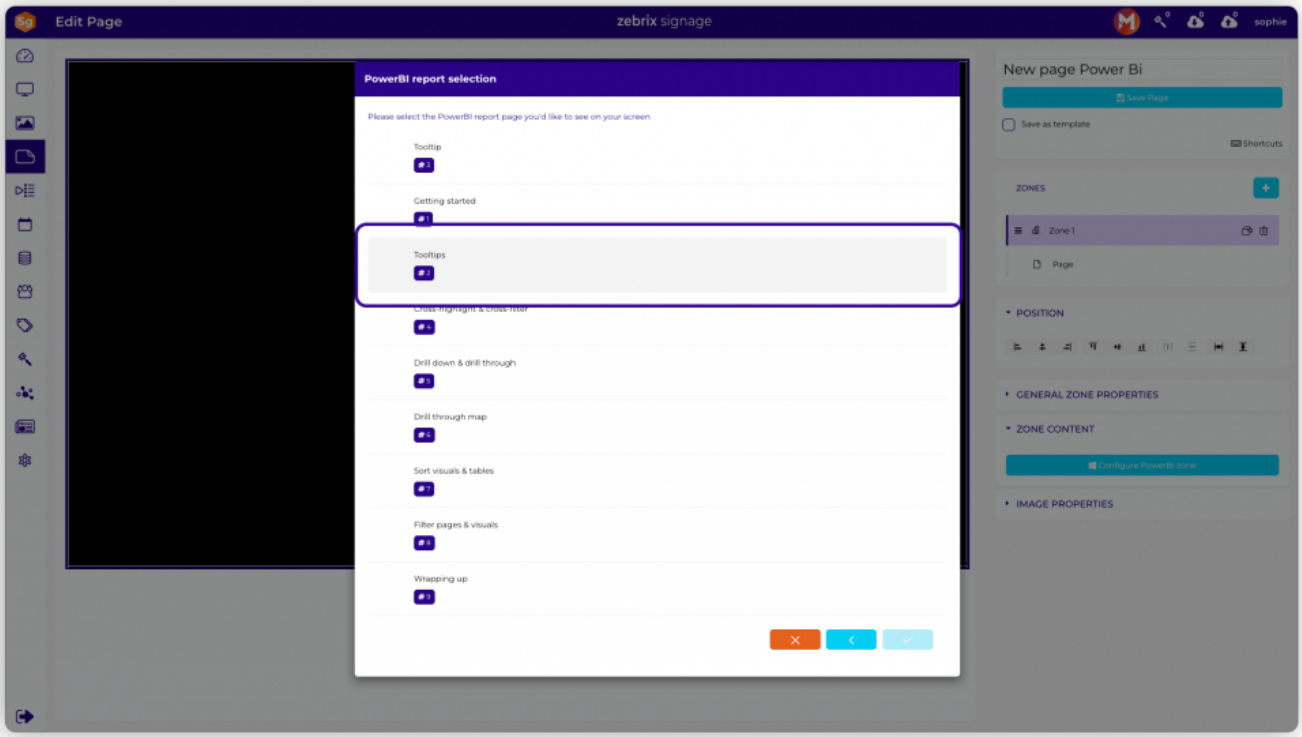

Add a new zone by clicking the + button. By default, a text zone is added to the page. Manually adjust the size of the zone.
Then, in the zone properties, click on “Select zone type” and choose **Power BI** from the list of available zone types.

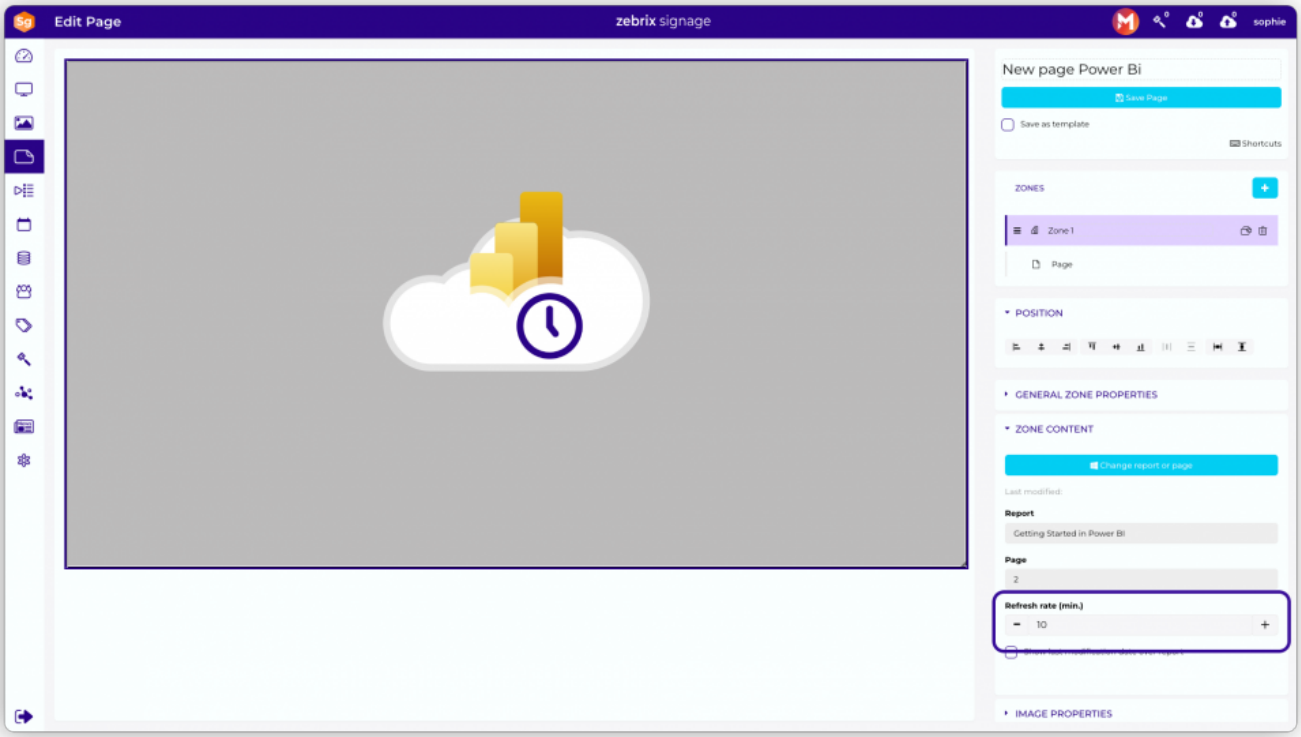

The modal window that appears displays the available Power BI reports. Select the one that matches your needs.

Next, choose the report page you want to display.

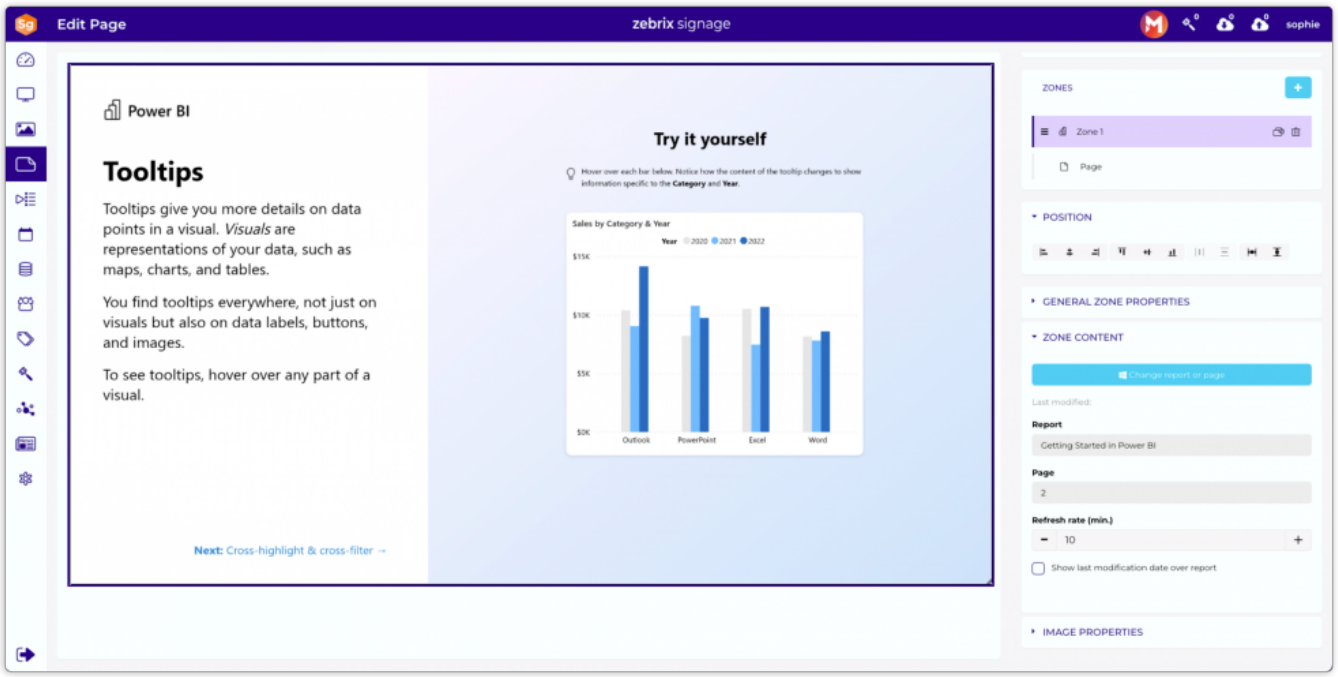

Once selected, the modal window closes and the preview shows a “pending” screen (waiting for the content update).

The zone works as a screenshot capture.
Here you can set the refresh interval.

The updated preview will display the selected page.
