

How do I display a Google calendar on a zebrix screen?

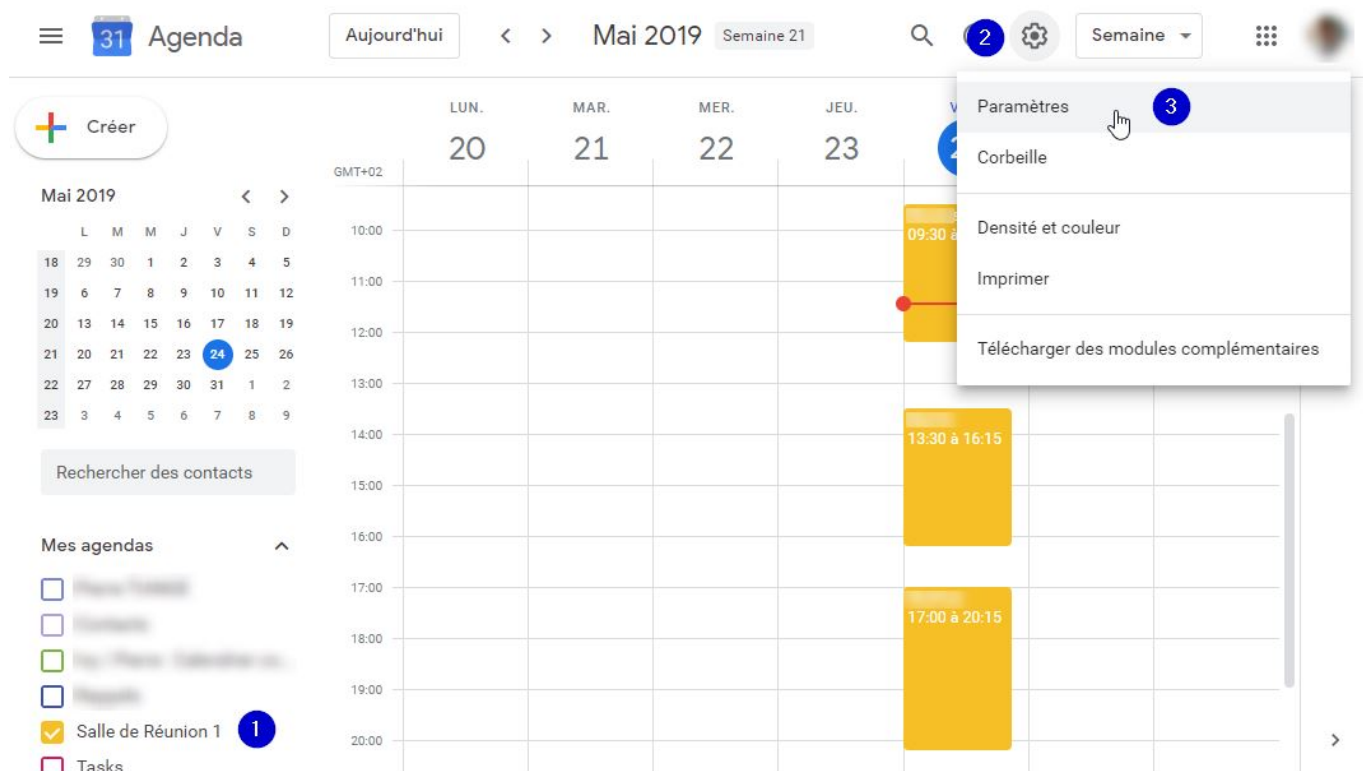

There are two ways to integrate a Google calendar on a zebrix screen.

- The first method is to use the zebrix Google Calendar widget. To do this, you will need to obtain the **ID** of your calendar.
- The second method is to use the published version of the calendar offered by Google, you will need to obtain **its public access link**.

 All Google calendars have a public access link. This does not mean that it is accessible to everyone though, in fact, only people who know about this secret link will be able to access it. Also note that it will not be possible to edit your calendar (it is only shared for viewing).

Here's how to get your calendar's ID and public URL:

Open your Google calendar and go to **Settings**

In the menu on the left in **“My calendars”** select the calendar concerned. In **Integrate Calendar** you will be able to obtain the public URL or ID

The screenshot shows the Google Calendar settings for a calendar named "Salle de Réunion 1". The "Intégrer l'agenda" (Integrate calendar) option is selected and highlighted with a blue circle and the number 1. The settings include:

- Paramètres de Google Agenda
- Accepter automatiquement les invitations
- Autorisations d'accès
- Partager avec des personnes en particulier
- Notifications relatives à un événement
- Notifications des événements "Toute la journée"
- Notifications générales
- Intégrer l'agenda** (1)

The "Intégrer l'agenda" section contains the following information:

- ID de l'agenda:** [redacted]8v0avqchii8@group.calendar.google.com
- URL publique de cet agenda:** [https://calendar.google.com/calendar/embed?src=\[redacted\]v0avqchii8%40group.cal](https://calendar.google.com/calendar/embed?src=[redacted]v0avqchii8%40group.cal) (2)
- Code d'intégration: `<iframe src="https://calendar.google.com/calendar/embed?src=[redacted]v0avqchii8" >`
- Adresse publique au format iCal: [https://calendar.google.com/calendar/ical/\[redacted\]8v0avqchii8%40group.calendar.g](https://calendar.google.com/calendar/ical/[redacted]8v0avqchii8%40group.calendar.g)

Method 1: using the widget

- Go to the widget catalogue and select the "Google Calendar" widget, which you can find at this address: <https://widgets.zebrix.net/>

The screenshot shows the zebrix widget selection interface. It is divided into two main sections:

- 1 - Choisissez votre widget :** This section shows a grid of widget options. The "Google" widget is selected and highlighted with a blue circle and the number 2. Other visible widgets include "Météo", "Facebook", and "Compteur".
- 2 - Prévisualisez et configurez votre widget :** This section shows a preview of the selected Google Calendar widget. It includes a "Prix : Free" label and a "Description" that reads: "Ce widget permet d'afficher vos rendez-vous ou événements de votre agenda Google". A blue circle with the number 3 is positioned over the preview area. The preview shows a calendar snippet with the following events:

13:30	Martin
16:15	
17:00	Mathias
20:15	

- Paste the calendar ID into the appropriate field
- Customise the colours and other settings as required - Copy the URL using the button provided.
- In zebrix, create a new page or edit an existing page
- Add a new zone, specify the zone type **"Web "**

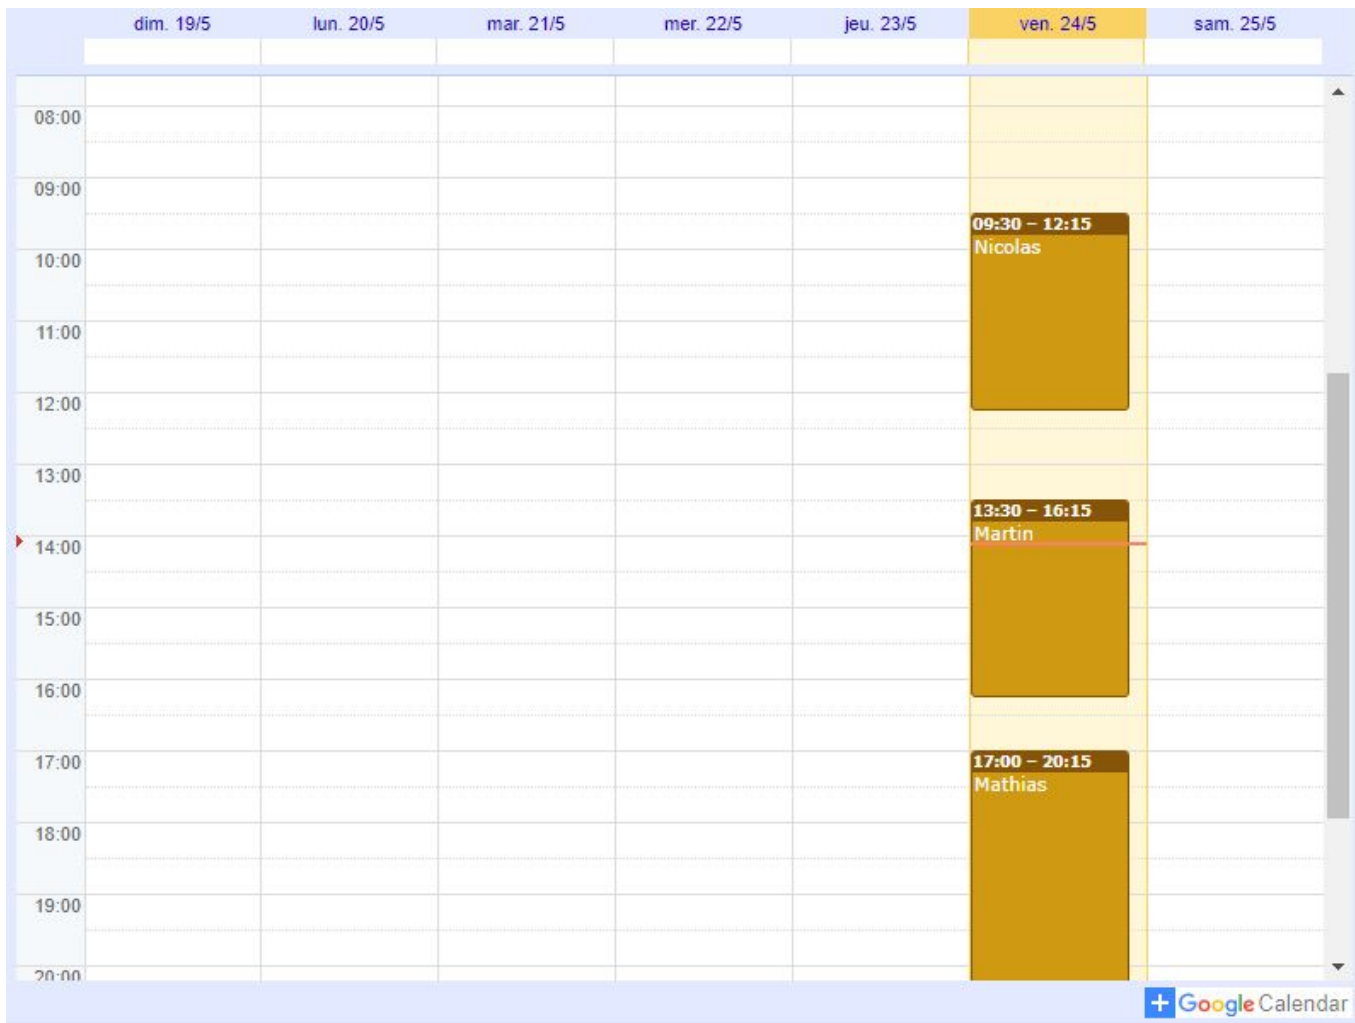

- Size it appropriately.
- IMPORTANT** in the “Web zone property” pane, click on the “Reset” button so that the calendar

occupies the entire size of the zone

Method 2: using the version published by Google
