### \*\*How to display an Office 365 Calendar (Outlook) on a Zebrix Screen ?\*\*

For the calendar to display correctly, you will need to publish it first.

"Publishing" your calendar will not automatically allow anyone to access it, only the people provided with link will be able to access it. Please note that it will also not be possible to modify the calendar (The sharing only allow user to see the document).

To do so, go to the online version of Outlook. The easiest way is to right-click on the calendar and to choose **"Publish this calendar"** in the sub-panel **"Share"**.

This should open your web browser, You will be able to publish the calendar. It's also possible to specify how many details you want to display (ex: only the titles, only the availability, every details).
