

# Factory Reset for a Tizen/SSSP screen

## Step 1

If the screen isn't already on, power it on. With the remote control, **select HDMI source, shut the screen off** by pressing the "POWER OFF" button and wait for 10 seconds.

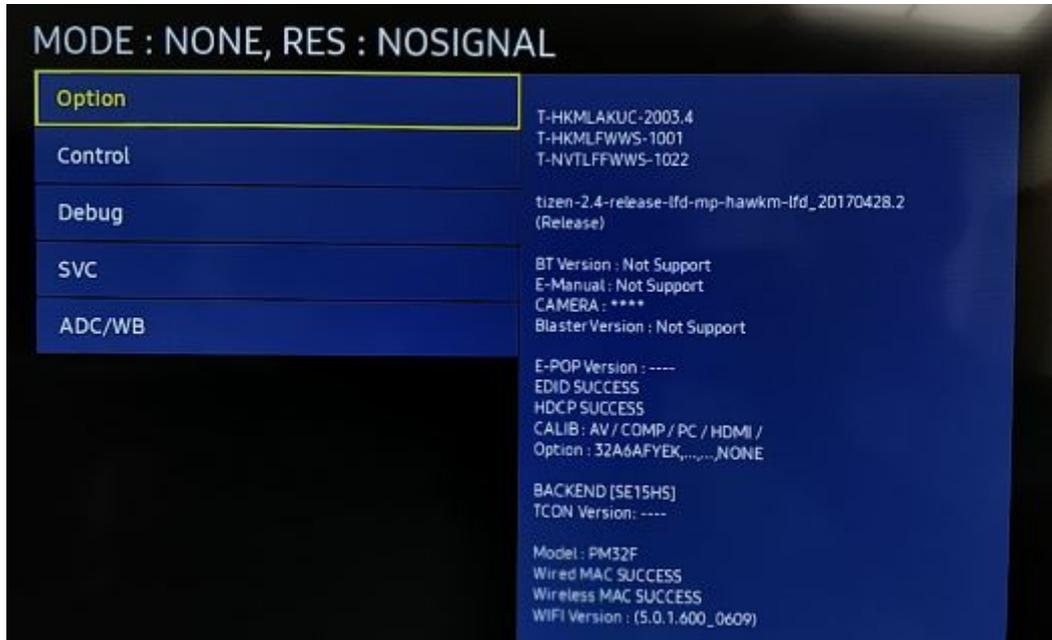

## Step 2

The following part has to be done in less than 5 seconds: Press the "**Mute**" button then press the following buttons in that order: "**1**", "**8**", "**2**" and then on the **power button** (which is red).

### Step 3

Once that code is entered correctly, the screen powers on and a menu appears.

### Step 4

On that menu, Choose "Option" (it's already selected by default) then "Factory reset" and again, select "Factory reset".

### Step 5

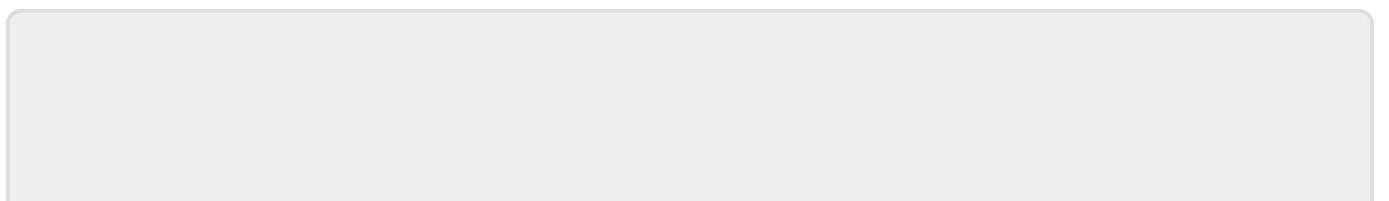

If done correctly, the screen should power off

### Step 6

You can now start the screen with the "Power On" button.

The screen is reset and ready to be configured.
