

Factory Reset for a Tizen/SSSP screen

Step 1

If the screen isn't already on, power it on. With the remote control, **select HDMI source, shut the screen off** by pressing the "POWER OFF" button and wait for 10 seconds.

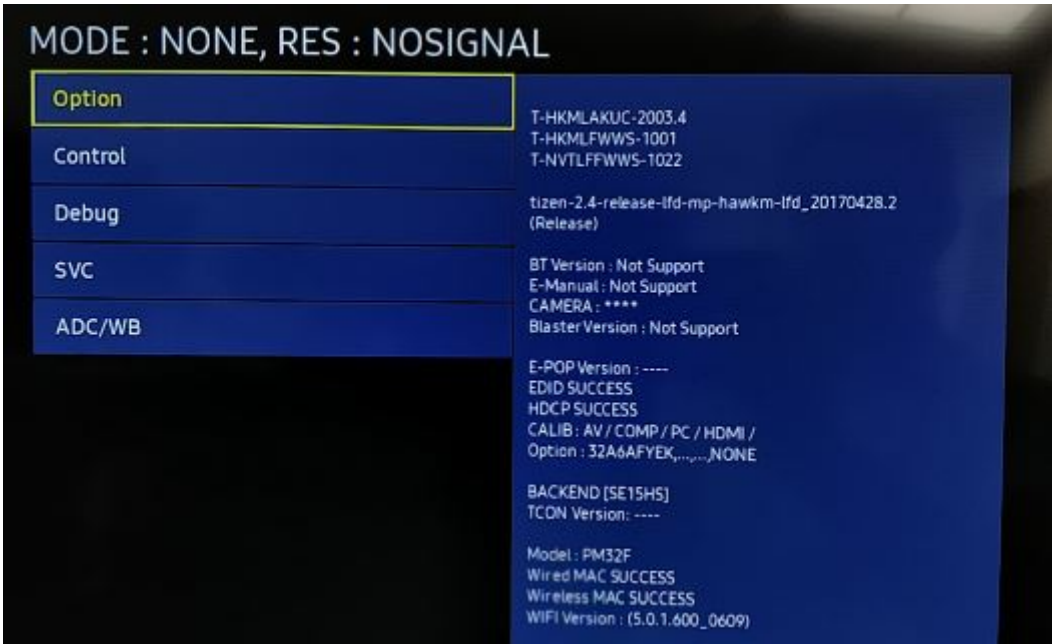

Step 2

This part as to be done really fast to work : Press the "**Mute**" button then press the following button in that order : "**1**", "**8**", "**2**" and then on the **power button** (which is red).

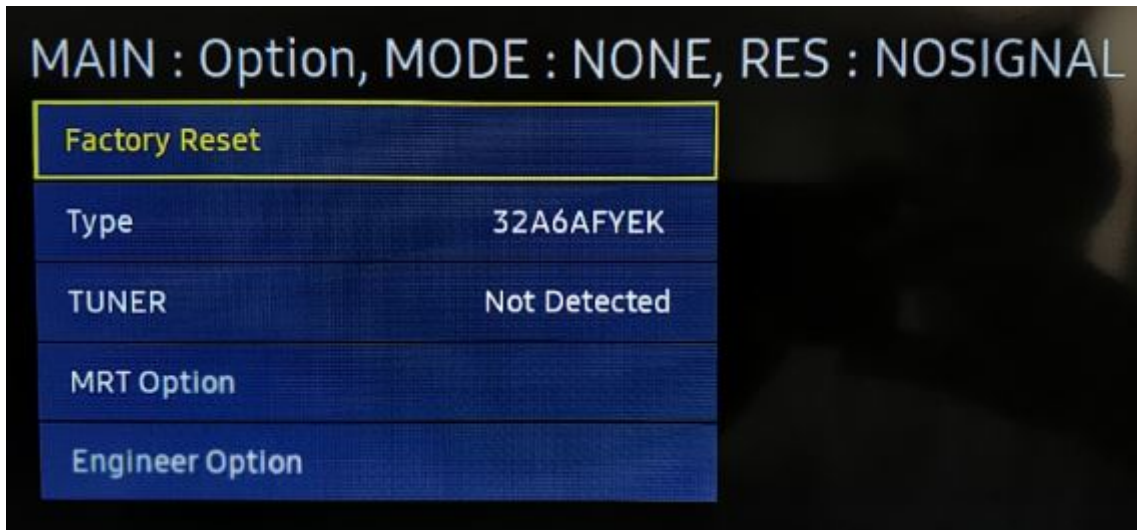

Step 3

Once that code is entered correctly, the screen powers on and a menu appears.

Step 4

On that menu, Choose "Option" (it's already selected by default) then "Factory reset" and again, select "Factory reset".

Step 5

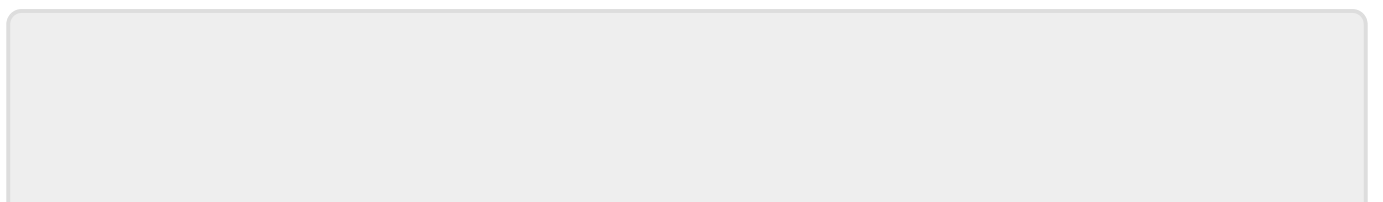

If done correctly, the screen should power off

Step 6

You can now start the screen with the "Power On" button.

The screen is reset and ready to be configured.
