# How to synchronize playback on multiple screens?

This guide explains how to synchronize the playback on multiple screens. It means that you can either play the same content (same playlist) simultaneously on multiple screens or you can synchronize the playback of different contents.

 For contents to synchronize, you'll need to have (or have been set with) the same duration and screens must use zebrix version 3 software player ([info here](#)) Please note that we also recommend using similar models of device to avoid de-synchronization due to CPU performance/latency that is different from one model to another (exemple : i5 is faster than Celeron CPU, content will be displayed a few milliseconds earlier).

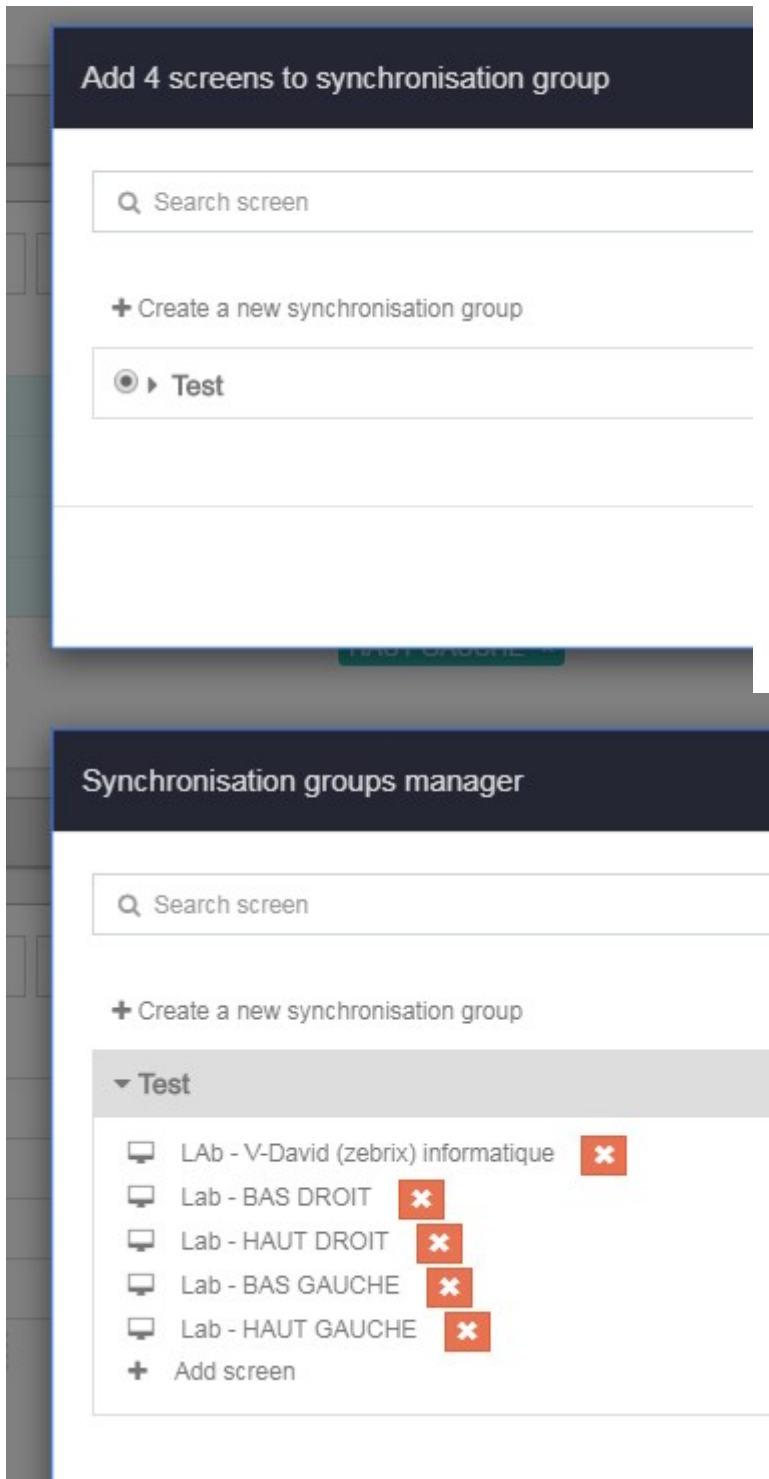

## You need to create a synchronization group

The screenshot shows the 'Screens' management interface. At the top, there's a 'FILTERS' section. Below it is a toolbar with various icons, including a button labeled 'Add screen to synchronization group'. A blue box highlights the first four rows of a table, and a blue arrow points from this box to the 'Add screen to synchronization group' button. The table has columns for 'Status', 'Name', and 'Tags'.

| Status                              | Name                                | Tags          |
|-------------------------------------|-------------------------------------|---------------|
| <input checked="" type="checkbox"/> | Lab - BAS DROIT                     | BAS DROIT x   |
| <input checked="" type="checkbox"/> | Lab - BAS GAUCHE                    | BAS GAUCHE x  |
| <input checked="" type="checkbox"/> | Lab - HAUT DROIT                    | HAUT DROIT x  |
| <input checked="" type="checkbox"/> | Lab - HAUT GAUCHE                   | HAUT GAUCHE x |
| <input type="checkbox"/>            | LAB - V-David (zebrix) informatique | HAUT GAUCHE x |

- Select screens you want to add to a synchronization groupe
- Create a new synchronization group or select an existing one
- Select the group to which you want to add selected screens

## Create one or multiple playlists

At this point, whatever identical content (or different but having the same duration) you'll send to these screens will

 automatically been synchronized

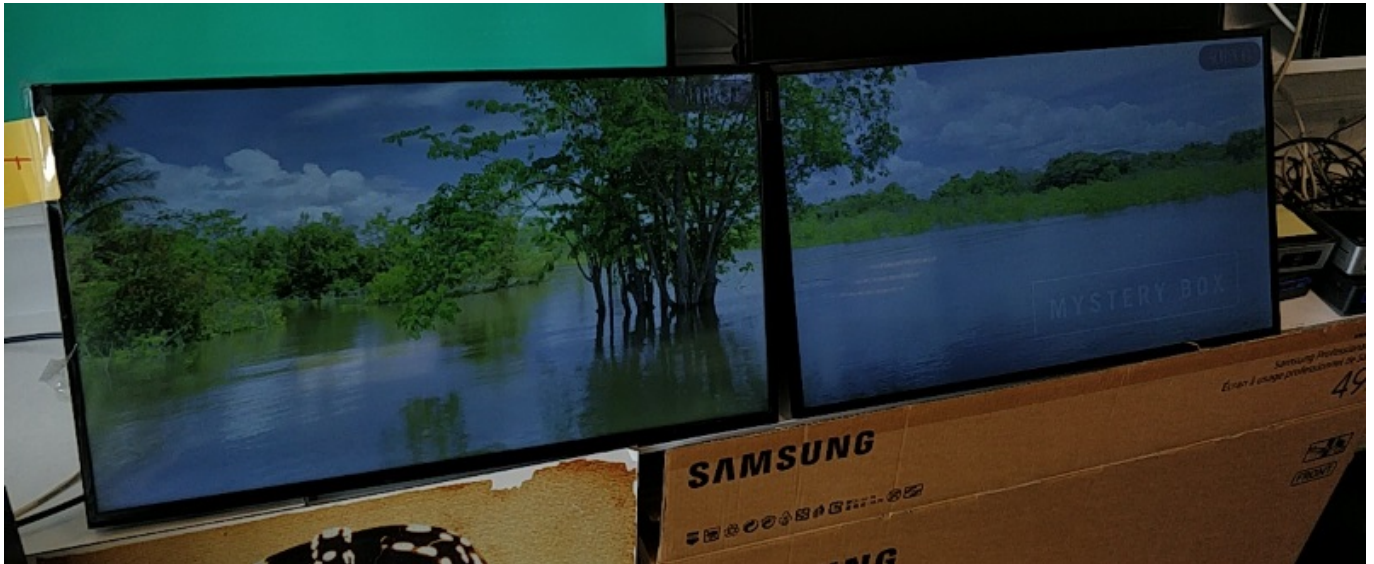

If you want to display the same exact content on multiple screen, you just have to schedule the same playlist on the screens that you want to synchronized (and which has been previously added to the same synchronization group). Job done!

If you wan to synchronize different content, you'll need to create different playlists (one per screen), each must have same duration structure, example:

| Scheduled on screen 1   |                   | Scheduled on screen 2      |        |
|-------------------------|-------------------|----------------------------|--------|
| Playlist 1              |                   | Playlist 2                 |        |
| Promo video 1           | same content      | Promo video 1              | 10 sec |
| Page welcome in English | different content | Page Bienvenue en Français | 8 sec  |
| presentation video LEFT | different content | presentation video RIGHT   | 5 sec  |
| Poster 1                | same content      | Poster 1                   | 20 sec |
| PROMO JANUARY           | same content      | PROMO JANUARY              | 15 sec |
| Promo video 3           | different content | Promo video 2              | 10 sec |
