

Transfer, Action, and API Usage Limits

To prevent potential misuse that could impact the integrity of the Zebrix platform, we have implemented a set of safeguards and usage limits.

Here are the main ones:

- Media file size limit per file: 2 GB
- Image processing limits: 500,000,000 pixels (width x height).
- Creation actions (tag, user, media, page, tag, playlist) are limited to 500 requests per day per resource per tenant (all users share 500 creation requests for each resource (tag, page, page, media, etc.)). There is no limit on updates to existing content.

You may see the error message **too many calls for today** if you reach these limits. You will need to wait until the next day for the counters to reset.
