

Quick user guide for the Zebrix Queue Manager (QMS) desktop application

1. Install the Zebrix Queue Manager (QMS) desktop application

Presentation

The Zebrix Queue Manager (QMS) desktop application allows a counter to manage its queue. The application must be installed on the workstation of each counter.

1 Prerequisites

1.1 Material

The Zebrix Queue Manager desktop application only works on a Windows (PC) environment

1.2 App download

To obtain the application, you must log in to the QMS web application online at the following address <https://qms.zebrix.net> and log in with your credentials. You can trigger the download of the application by clicking on the **Download app** button or by clicking on the following link <https://qms.zebrix.net/app.zip>

You will then need to go to the compressed “.rar” zebrix-qms-desktop folder uploaded to your computer, extract it with a right click on the file, extract the file.

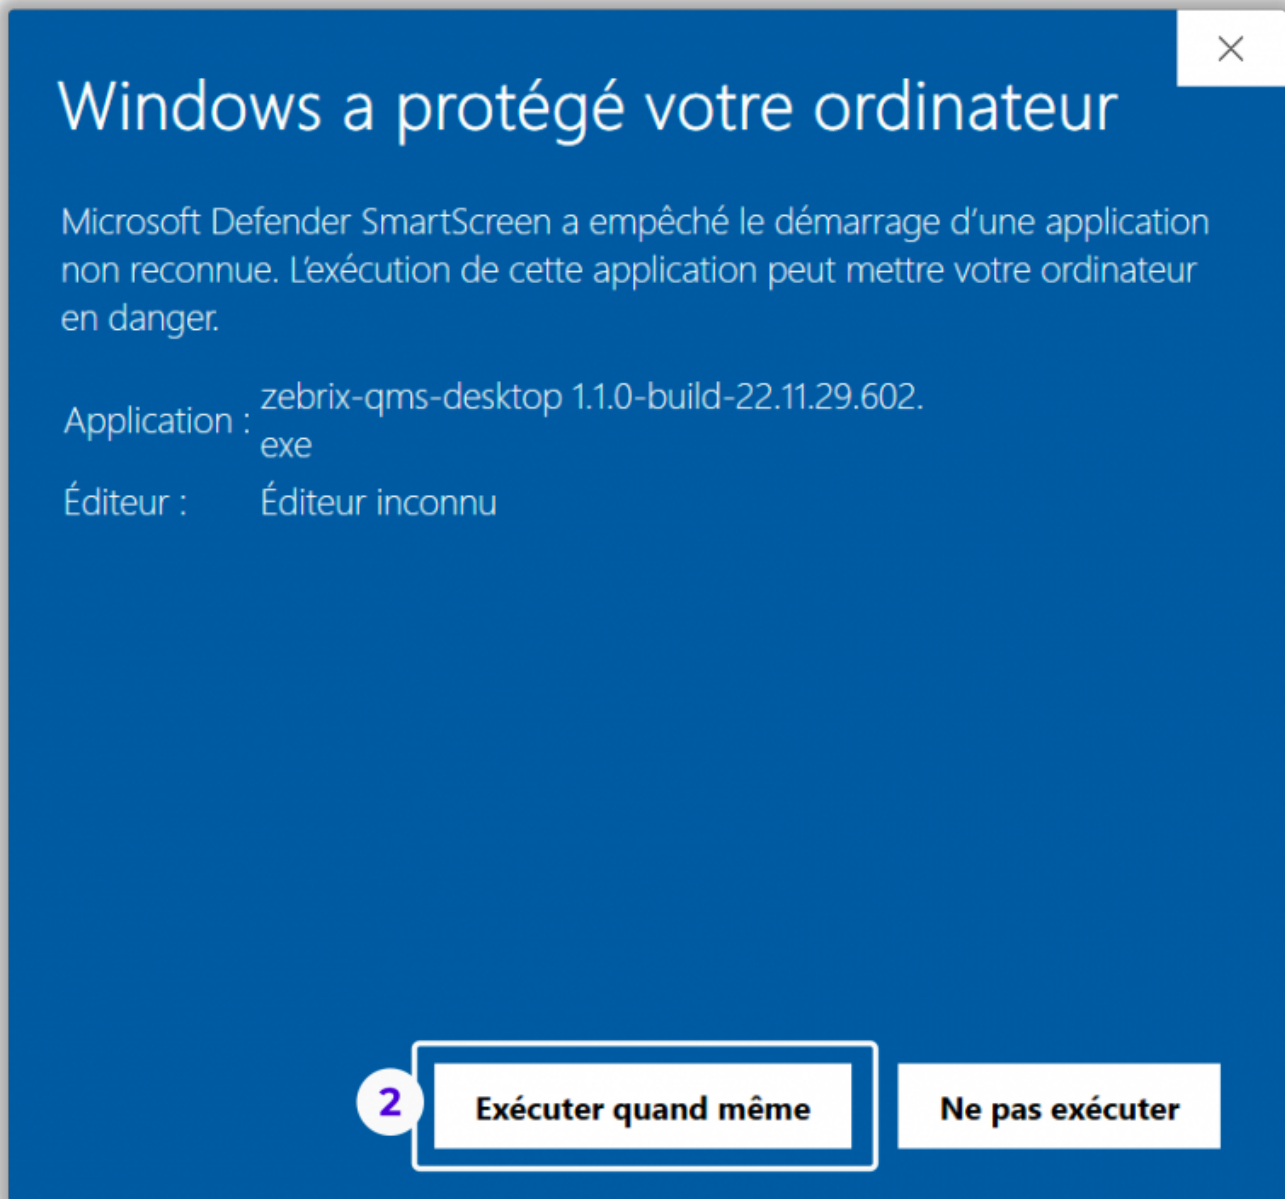

1.3 Running the application

Double-click the extracted file to start the installation. It is possible that an alert message is displayed, the Windows fire wall may react to the installation of this new application.

You will need to click on additional information to discover the **Run anyway** button and finally click on it to complete the launch

2 Configuration

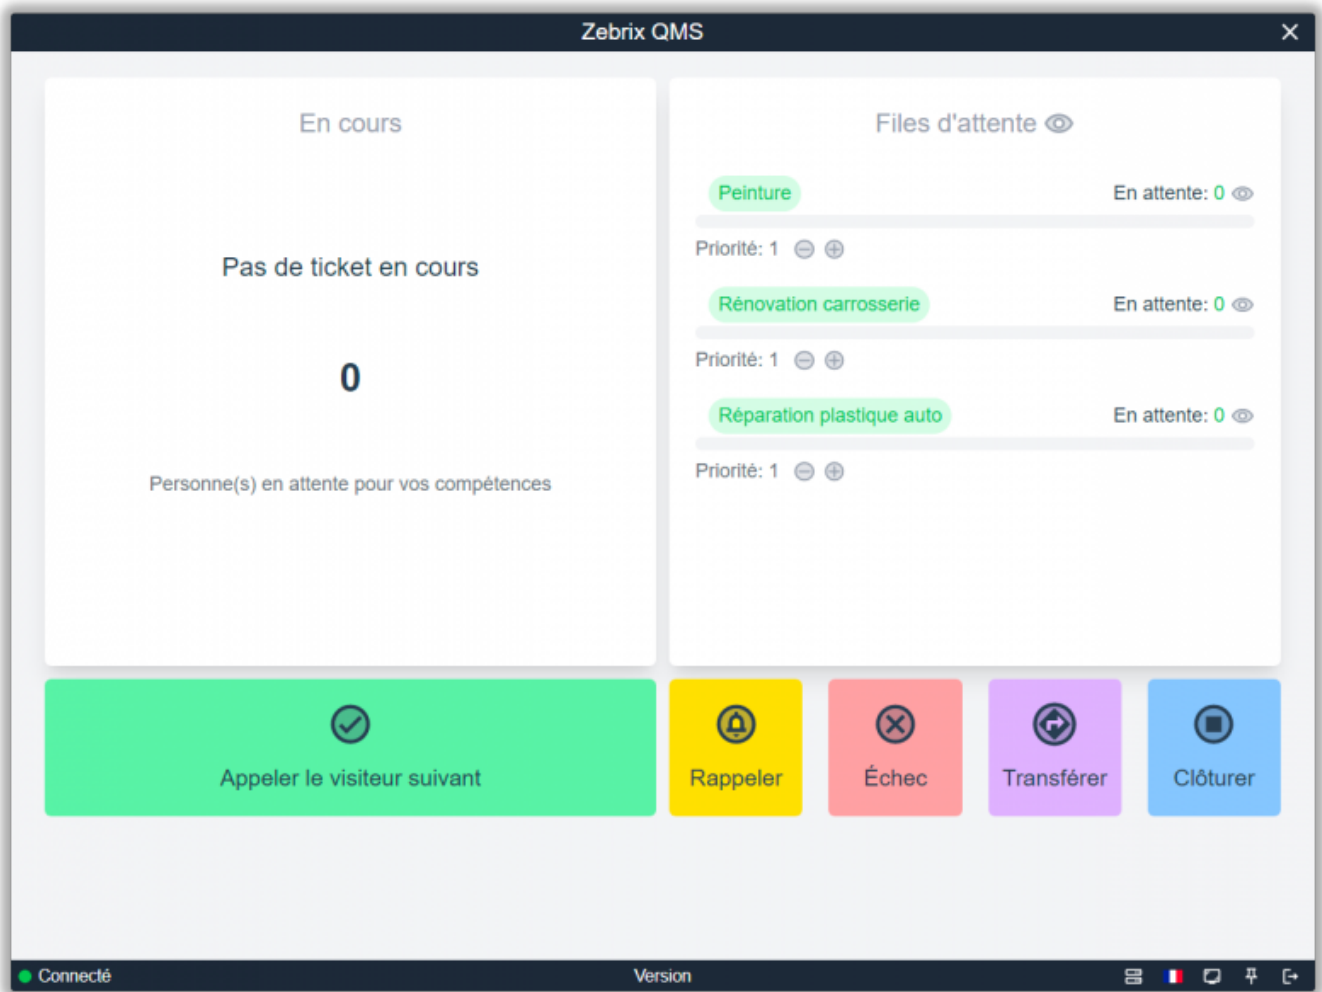

When launched, the application asks you to enter the IP address of your Zebrix Queue Manager server, enter it and click confirm. **The IP address of the server has normally been communicated to you**, otherwise contact your support.

Then choose the window to control, then click on confirm.

The counter is ready to operate

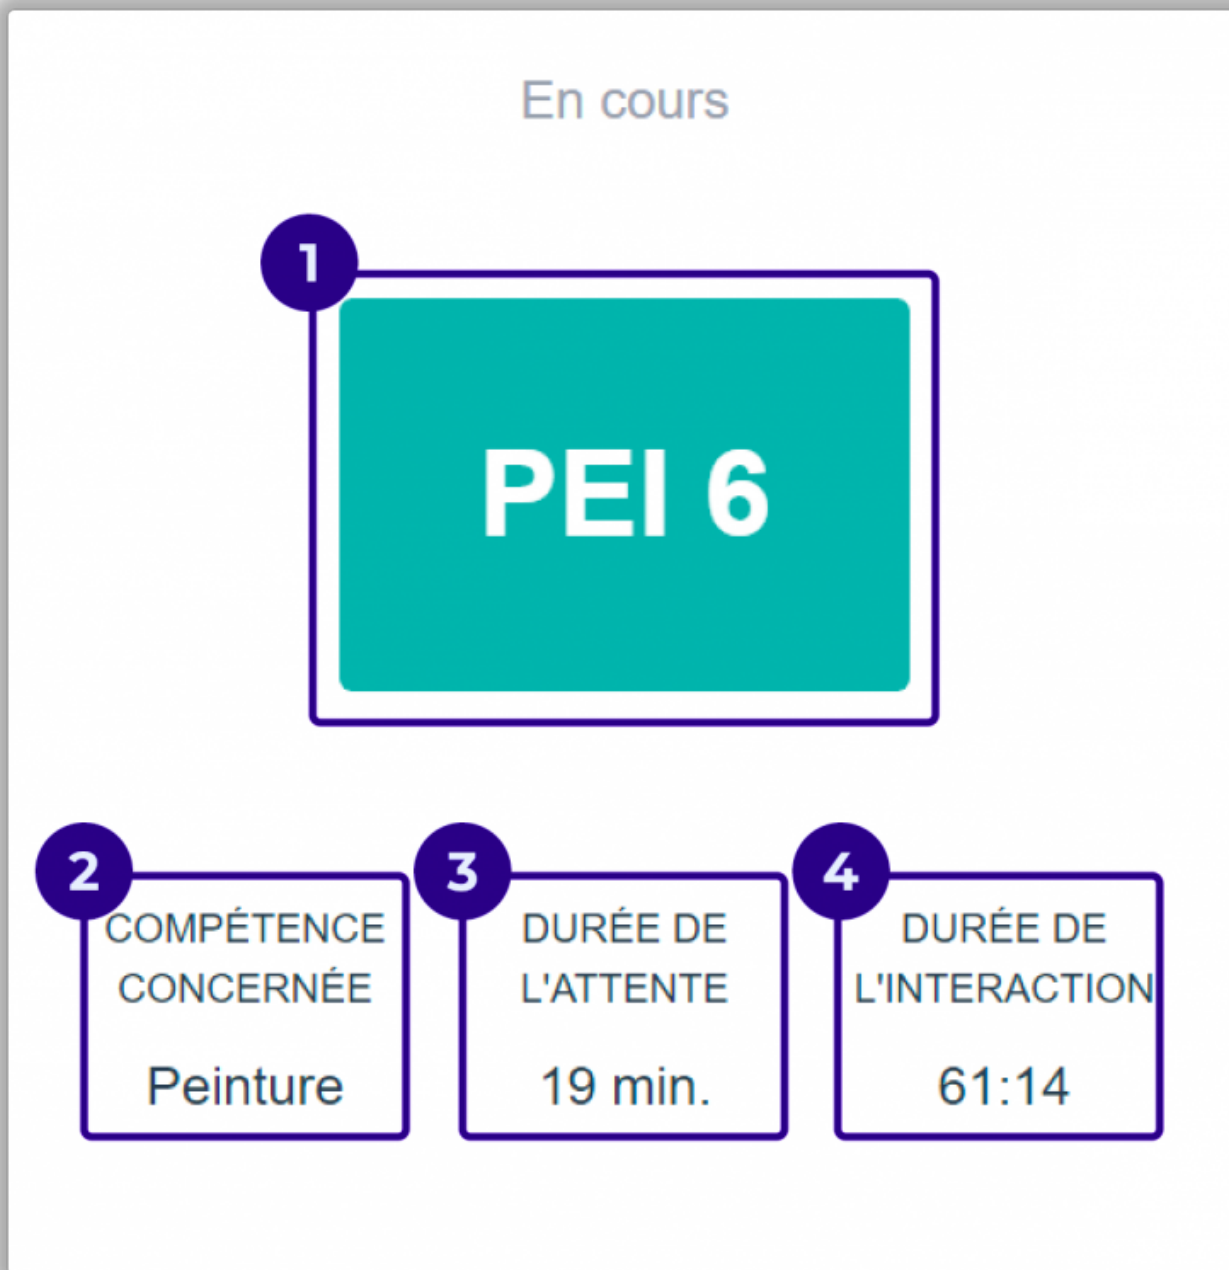

3 Interface

Presentation

1	Ticket in progress	Indicates information about the ticket currently being processed
2	Queue by skill	Indicates the number of tickets waiting by skill
3	Call next visitor button	This button closes the current ticket and goes directly to the next ticket
