

# How to upgrade SAMSUNG SSSP firmware from CMS?

- Please login to your zebrix account
- Please go the screens section
- In the list of screens please click on the “Hardware Tools” button on the line of screen you want to upgrade

- Go to monitor tab

A screenshot of the CMS interface showing the 'Monitor' tab selected. The overall layout is similar to the previous screenshot, with the dark blue header 'Hardware Tools - LAB DEV - Screen 05 - TEST' and the 'Monitor' tab highlighted. The main content area shows a table with columns 'Name', 'Status', 'Description', and 'Action'. It lists the same two firmware versions as the previous screenshot: 'T-KTMLAKUC-2130.2' (Status: Stable, Description: SAMSUNG firmware for SSSP5 screens, Action: Install) and 'T-KTMLAKUC-2140.2' (Status: Experimental, Description: SAMSUNG firmware for SSSP5 screens, Action: Install). The orange 'X' button at the bottom right is also present.

- Click on the firmware button (the version on the button is the current, in the list you see available firmwares)

Please note that only compatible firmwares will be listed, depending on your screen model.

- Upgrading to the latest is the best unless there is a “BETA-VERSION-DO-NOT-USE” message.
- Your screen will download the firmware (usually takes several minutes) and will automatically upgrade and reboot.

<input type="checkbox"/> Statut	Nom ↓ <sup>A</sup>
<input type="checkbox"/>	Écran accueil
<input type="checkbox"/>	Écran allée centrale
<input type="checkbox"/>	Écran boucherie
<input type="checkbox"/>	Écran caisses
<input type="checkbox"/>	Écran Fruits et légumes2
<input type="checkbox"/>	Écran poissonnerie

When the screen is downloading the firmware, it continues to work as usual (it shows content and update the content if changed). When the download of the firmware is complete, it will interrupt the playback to upgrade. This operation takes about 2 minutes then the screen will reboot and restart zebrix automatically.
