# Timezone

This guide explains how zebrix deals with time and more precisely the timezones.

## General information

- Zebrix automatically sets the time in the screen at each startup. (It is therefore unnecessary to adjust the time via the screen menu)
- The time displayed in the menu is always set to GMT (Greenwich Mean Time +00h00) whatever the timezone that is chosen.
- Zebrix is in charge of transforming the GMT time into the correct local time, thanks to the TimeZone configured on the CMS (see below)
- Go to “Hardware Tools” on the concerned device, then “Monitor”. The local date/time of the screen corresponds to the time translated by zebrix which is the correct local time (GMT time + the time difference applied on it thanks to the timezone that has been chosen).
- The time that is displayed in a “date/time” zone on the pages assigned to the screen is identical to this local date.

## How to change the time zone

This guide will explain how to change the time zone

## How to change the timezone on a screen

- Select the screens on which you want to apply a different time zone
- Click on “hardware tools”
  1. Go to the “properties” tab
  2. Select the desired time zone and click on apply
