Timezone

This guide explains how zebrix deals with time and more precisely the timezones.

General information

- Zebrix, automatically sets the time on the screen, at each startup. (It is therefore unnecessary, to change the time via the screen menu)
- The time displayed in the menu, corresponds to GMT (Greenwich Mean Time +00h00).
- Zebrix, it is in charge of transforming the GMT time into local time, thanks to the TimeZone configured on the CMS (see below)
- In the part Hardware Tools - Supervision of the CMS, the local Date of the screen corresponds to the time interpreted by Zebrix that is to say GMT time with the difference of the Time Zone.
- The time that is displayed in a time “zone” of the pages assigned to the screen is identical to the local Date.

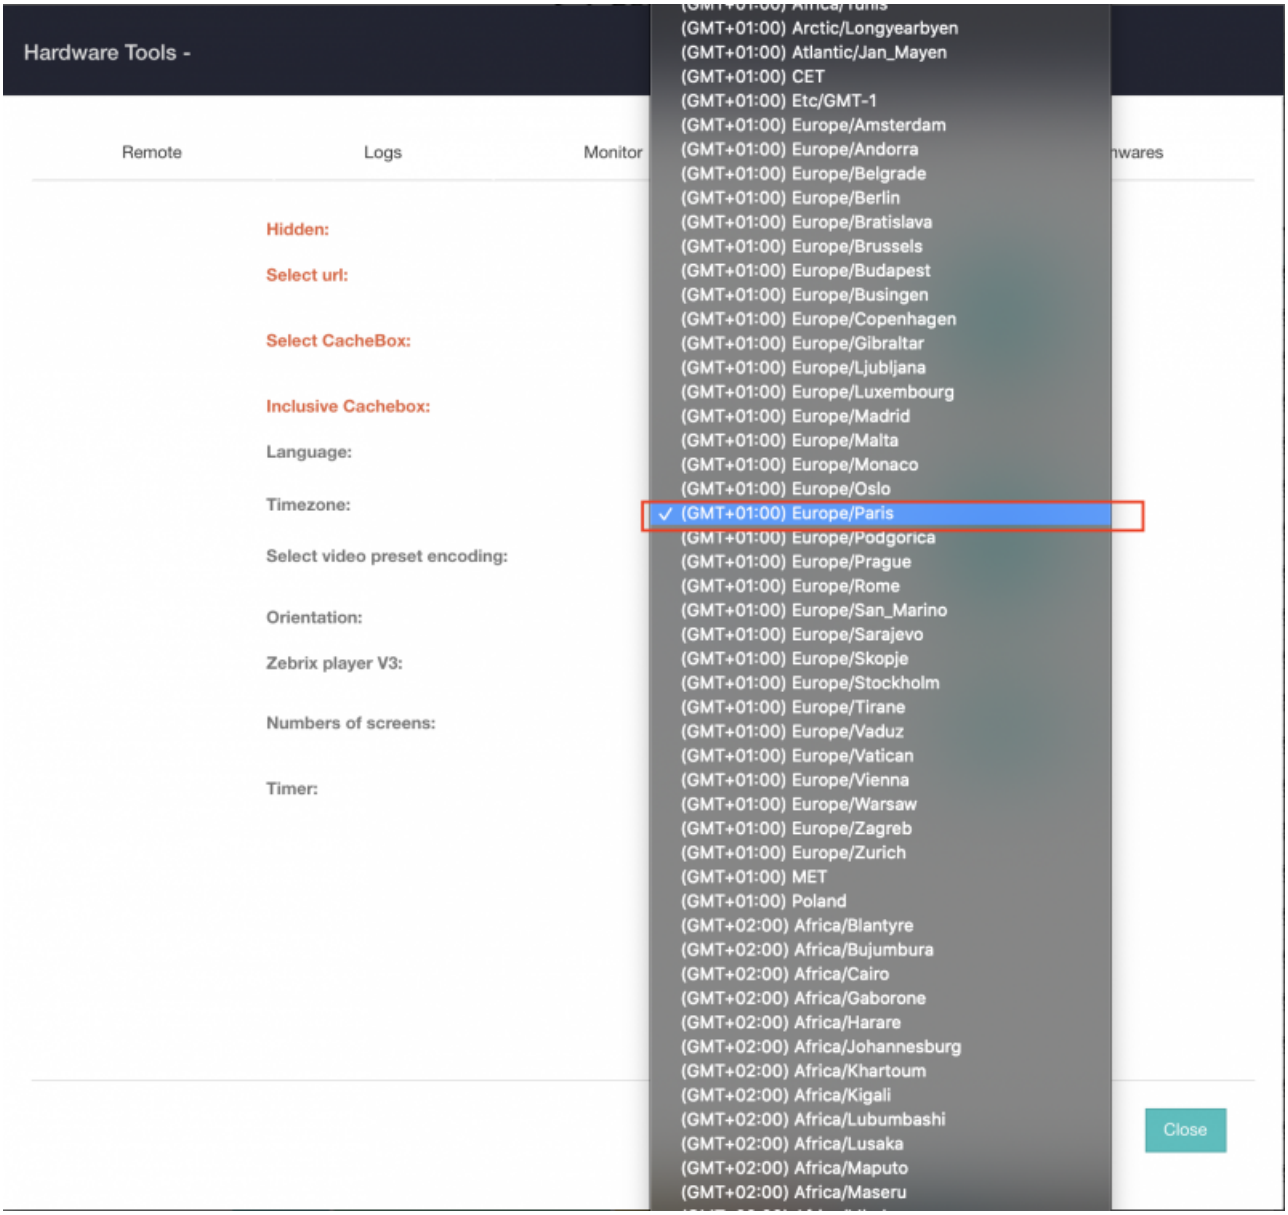

How to change the time zone

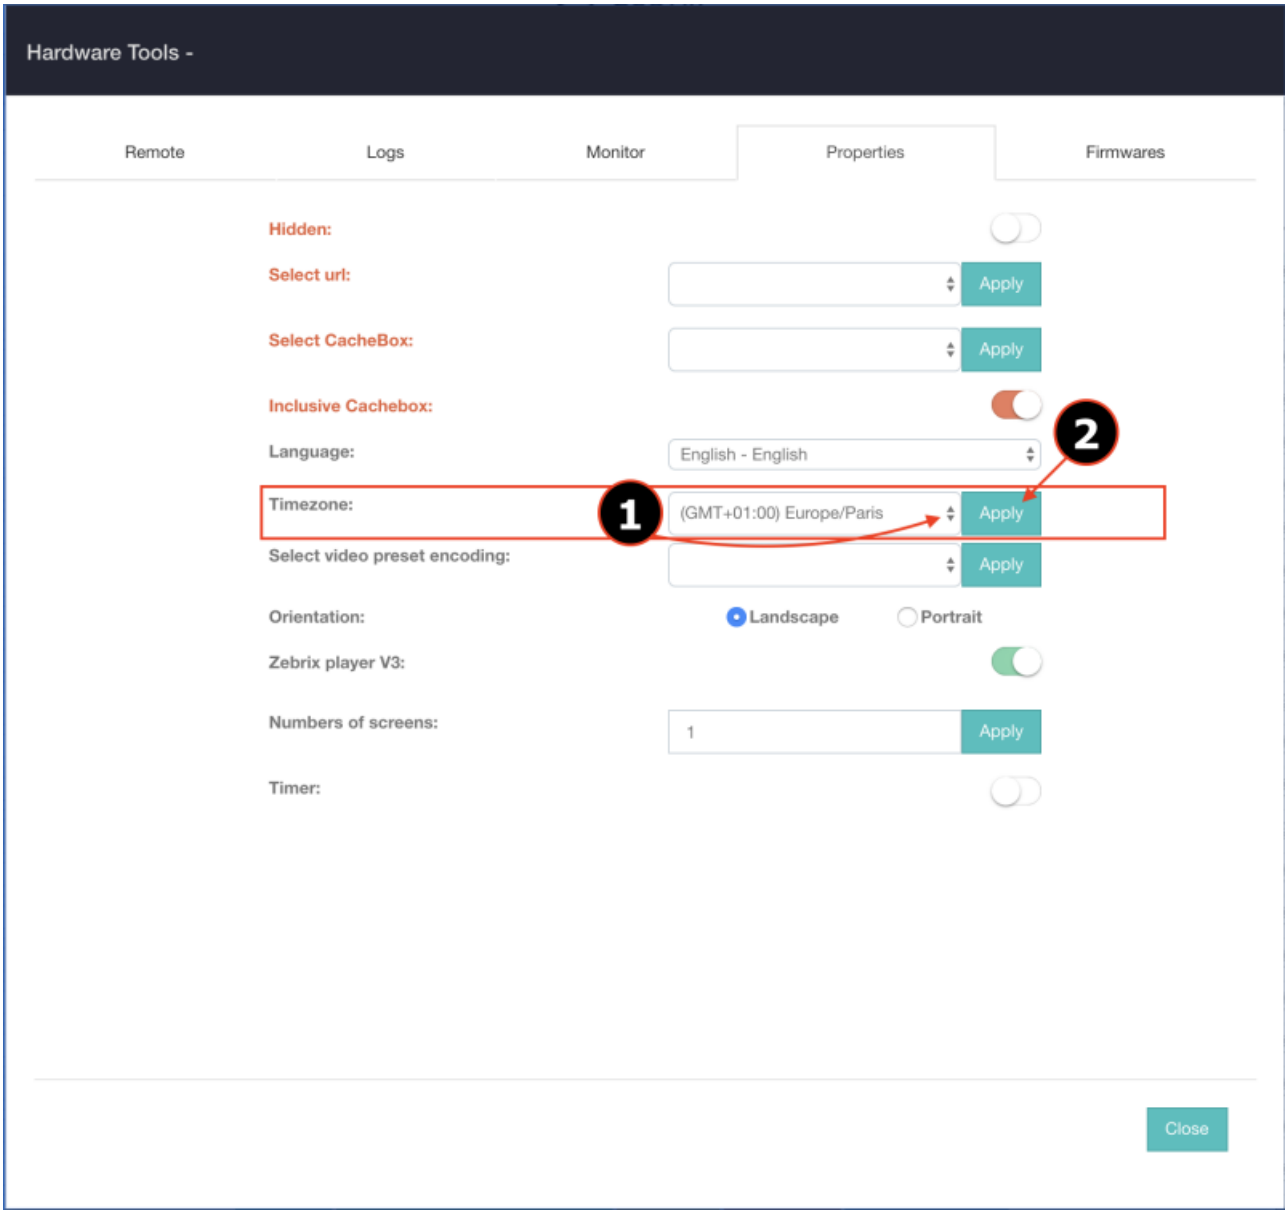

This guide will explain how to change the time zone

How to change the timezone on a screen

- Select the screens on which you want to apply a different time zone
- Click on “hardware tools”
    1. Go to the “properties” tab
    2. Select the desired time zone and click on apply
