

Widget Be Alert

Access link

<http://widgets.zebrix.net/> in the news tab

Specificities

The BeAlert widget allows you to broadcast on your screens the alerts issued by the Belgian government for the safety of its citizens. For more information, please visit www.be-alert.be. The alerts are broadcasted on the concerned geographical areas. So, to broadcast the right alerts on the right screens in the right areas, you need to determine the gps position of the screen (longitude, latitude) via the widget.

On the site: www.coordonnées-gps.fr You can get the GPS coordinates of your screen, from the postal address of the company where your screen is physically located.

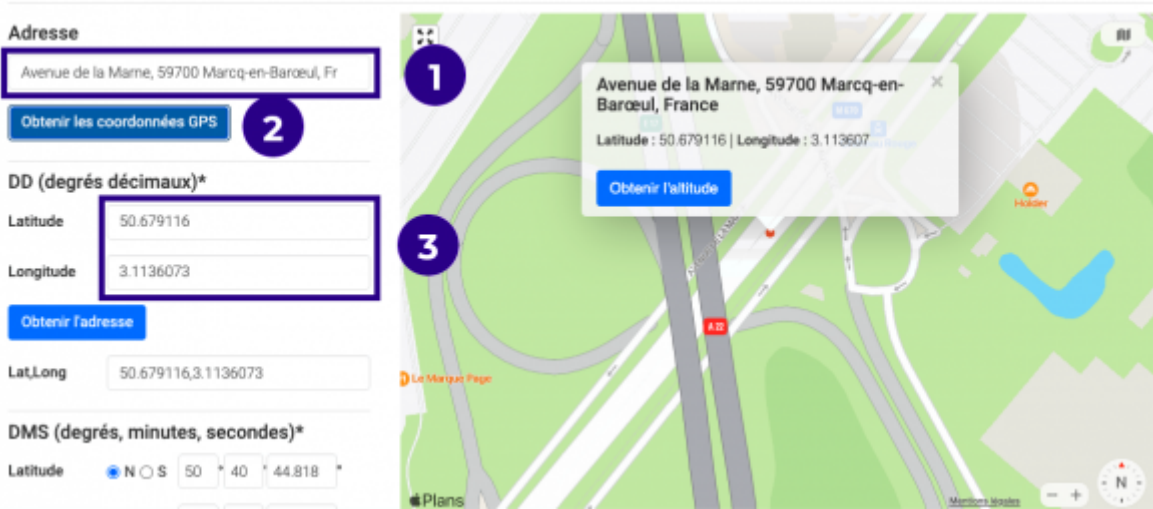

Trouver l'adresse correspondant à des coordonnées GPS

Adresse depuis latitude et longitude décimales : Remplir les coordonnées décimales et cliquer sur le bouton "Obtenir l'adresse" correspondant.
Adresse depuis latitude et longitude sexagésimales : Remplir les coordonnées sexagésimales et cliquer sur le bouton "Obtenir l'adresse" correspondant.

Latitude, longitude et adresse d'un point sur la carte interactive

Cliquer directement sur la map interactive pour obtenir l'adresse et les coordonnées GPS du point cliqué. La latitude et la longitude sont affichées dans la colonne de gauche et sur la carte.

- 1 Enter the mailing address where the display is located.
- 2 Click on Get GPS Coordinates
- 3 Copy the longitudes and latitudes into the widget.

[In the widget catalog](#)

Click on news and select the be-alert widget.

The screenshot shows the configuration page for the 'Be Alert' widget. At the top left is the 'EURO2021' logo. Below it, a black header reads '2 - Prévisualisez et configurez votre widget :'. The main area contains the following fields:

- Prix :** Free
- Description :** Ce widget permet d'afficher les alertes 'be Alert' sur le territoire belge.
- URL :** `https://widgets.zebrix.net/generic/bealert/?lon=3.1136073&lat=50.679116` (with a 'Copier l'URL' button). A blue circle with the number '5' is next to it.
- Mon écran est connecté en :** **https**
- Longitude :** (with a blue circle '4' next to it). Below the field is the text: 'Choisi la longitude de la ville où se trouve votre écran'.
- Latitude :** . Below the field is the text: 'Choisi la latitude de la ville où se trouve votre écran'.
- Durée d'un message :** . Below the field is the text: 'Déterminer la durée d'affichage d'un message en seconde (si plusieurs messages sont à afficher en même temps)'.

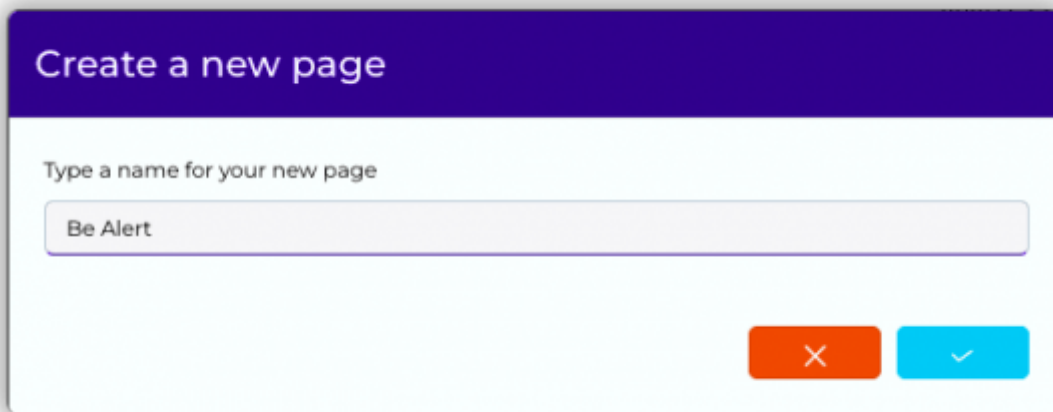

At the bottom center, there is a link for 'Mentions légales'.

- 4 paste the obtained GPS coordinates in longitude and latitude respectively.
- 5 copy the widget url

Note: It is more than likely that nothing is displayed in the preview, this is normal, it simply means that for the gps coordinates entered, there is no alert for the moment. On the other hand, the duration of a message will have an effect only if several alerts are given at the same time on the same area, it is the duration of each message in alternation, from 2 messages.

Then in the CMS, create a new page.

In the page editor :

Create:

- A portrait page, for portrait screens.
- A landscape page, for landscape screens.

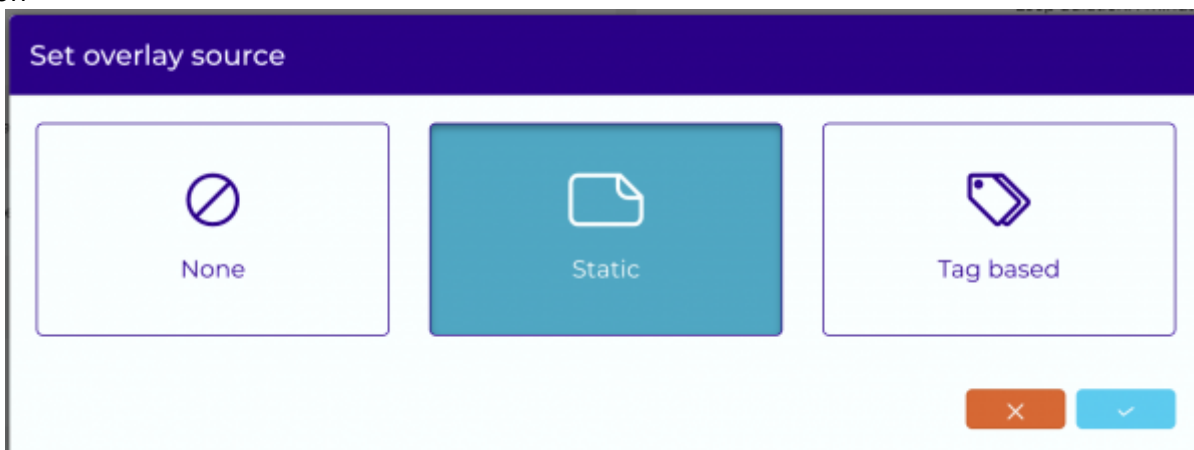

For an optimal display, you should add a web zone on the whole page. The display of the zone will be adapted on portrait and landscape screens. Then paste in the content area tab the url obtained in the widget catalog. Save your page.

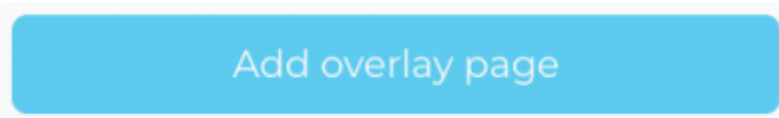

In the playlist tab create or edit the playlist that you will broadcast with your be alert widget Press on

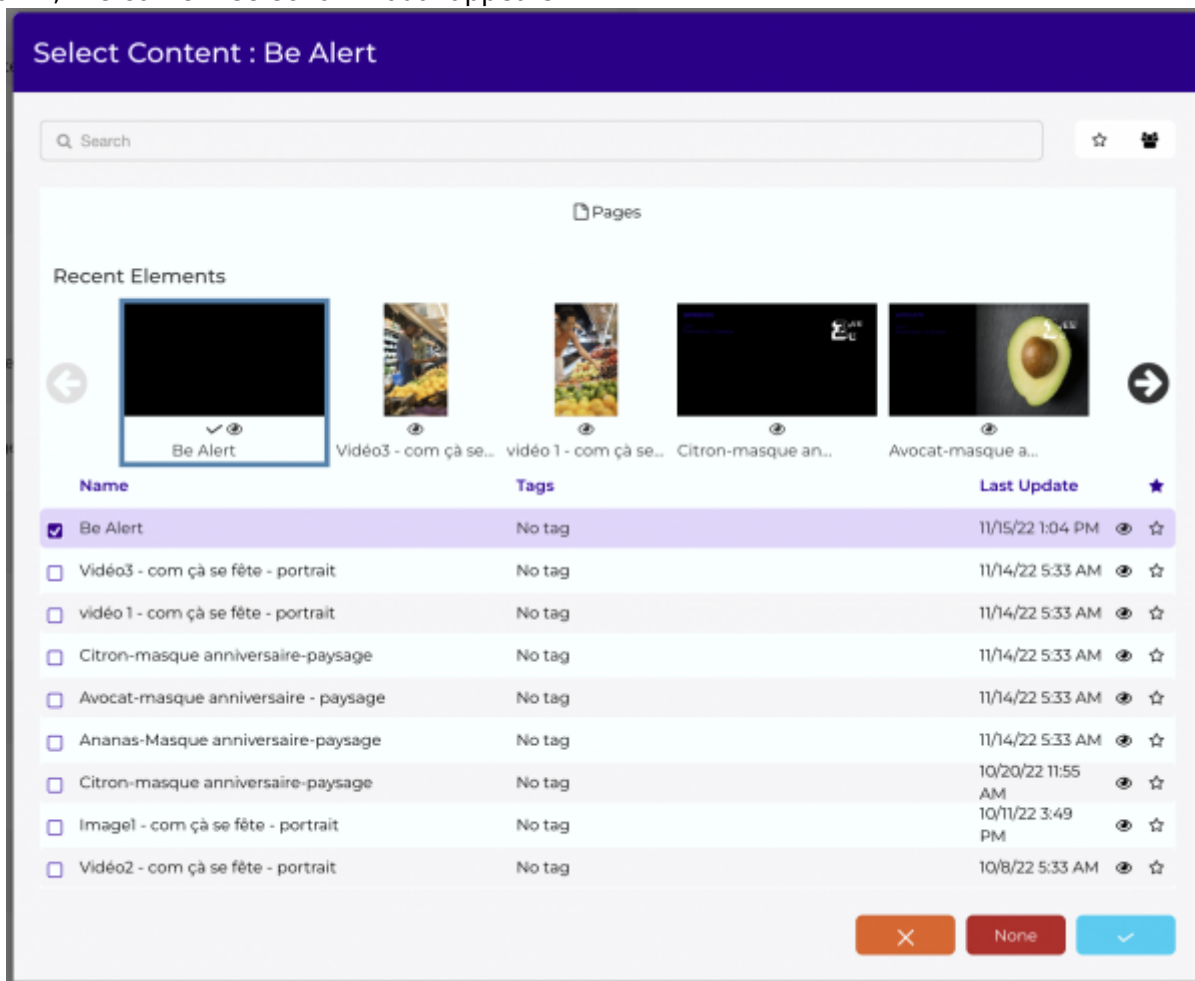

then on

click on static then ok to close the modal. Then click **save**. A new button **Add overlay page** appears under **change overlay type**

click on it, the content selection modal appears

Choose your beAlert page in the list, click on Ok and then save your playlist BeAlert will automatically appear on your screen over your playlist on a third of the page, if an alert is declared.
