

How to use a zebrix on LED Panels

What is a LED panel and how does it work

If you use a SAMSUNG LED panel

SAMSUNG SNOWBOX (external controler for LED panel) are powered by SAMSUNG SOC and Tizen OS which means no additional external player is required and zebrix can be installed right on the SAMSUNG SNOWBOX by configuring the zebrix URL (<https://screen.zebrix.net>) in the URL Launcher.

For any other SAMSUNG LED
