

How to use zebrix on a ProDVX display?

Installation

- **Either** download zebrix from <https://apk.zebrix.net> using Google Chrome on the ProDVX display, you may have to grant the permission to install APK from unknown source.
- **or** download zebrix from <https://apk.zebrix.net> using your PC, then transfer the APK file to the ProDVX display using a USB Drive and built-in file explorer, you may have to grant the permission to install APK from unknown source.

Set the orientation

- Configure the screen orientation accordingly to your needs by going to **Settings > Display orientation**

Configure a daily reboot

- It is mandatory to configure a daily reboot of the display. Please go to **Settings > Schedule > Reboot** and set a daily reboot time (e.g. 3.00am)
- (optional) As zebrix will only display a black image when no content should be displayed, you can also set a LCD panel off time during night time by going to **Settings > Schedule > LCD Off**
