## Zebrix player reinstallation image with custom configuration

## Introduction

This guide is intended to describe steps to create a zebrix player reinstallation USB drive **including a custom configuration** that will be deployed on the zebrix player during the reinstallation process. A custom configuration might includes custom zebrix settings (specific zebrix server URL, custom screen resolution, watchdog settings, etc.), custom linux host file (required for customers that can't use/not allowed to use DNS server), etc.

## STEP 1: create a standard zebrix reinstallation USB drive

First you need to create a standard zebrix reinstallation USB drive. To do so, please follow the following guide: How to create a USB drive for zebrix player reinstallation?

## STEP 2: download the configuration template

3 configuration can be imported in the freshly reinstalled player :

- zebrix.conf : zebrix configuration file
- hosts : linux hosts file
- clients.conf : VPN client configuration (for remote management by zebrix support)

You can download the following ZIP file that contains these file that you can use and modify to your needs.
